Upgrading to IBM Cognos Controller 10.3X

Why Upgrade? The main thrust of the 10.3 release is a 'true' web front end covering the functions of the subsidiary user. This is a major change from the classic client that we have become used to and is a major step forward.

Key new features

Controller Web:

- **Simple intuitive interface** with fewer clicks
- **True web application** – designed for subsidiary users removing need for Citrix
- **Real-time data reconciliation** – reconciliation status updates real-time as data is changed
- **Real-time intercompany balance agreement** - in subsidiary reporting currency works on J and I intercompany accounts
- **Efficient data import** – including real-time error logging and real-time update of mapping tables in one process
- **Format of source files extended** to upload XLS; XLSX formatted files
- **Granular source data** – the ability to drill back to source data

Classic Client:

- **Improved stability** – fewer error messages
- **64-bit processing** (from 10.2 on)
- **64-bit support** for all supported Excel versions
- **Microsoft SQL Server 2016 support**
- **Windows Server 2016 Standard and DataCentre** editions support
- **Audit log** now captures when a user logs in and out of IBM Controller
- **Schedule an optimisation** to run at a certain time
- **Retrieve transaction amount in Excel link** – for an IC account in a given currency FGetTransVal that retrieves
- **BI report engine** – rewritten to be compatible with IBM Cognos Analytics

How can HAYNE help you?

HAYNE are experts in IBM Cognos Controller and can assist with your upgrade in the following ways:

- **Technical installation**
- **Upgrade planning and scoping**
- **Assistance with testing**
