

Upgrading to IBM Cognos Controller 10.4X

Why Upgrade? The main thrust of the 10.4 release is an enhancement to the web front end. Improvements have been made to the end user experience including new functionality.

The web front end introduced in v10.3 was a major change from the classic client that users were accustomed to and was welcomed as a major step forward.

Please note that all versions of IBM Cognos Controller 10.2 reach End of Support with IBM on 30th September 2019.

Key new features

Controller Web:

- Easier navigation through the submission process
- Landing page of an open project displays the company tree with each entity's submission status
- Refreshes company status periodically – near real-time updates
- Ability to run consolidations – triggered directly from Controller Web
- Notifications are displayed throughout the submission process

Classic Client:

- End your own disconnected session*
- Licence Management Report
- Manage active Cognos Controller Web users
- Tracking of period and company locking and unlocking
- Export structures that are created in Cognos Controller Web

*this is a major improvement for Administrators – it ends the 10min wait!

How can HAYNE help you?

HAYNE are experts in IBM Cognos Controller and can assist with your upgrade in the following ways:

- **Technical installation**
- **Upgrade planning and scoping**
- **Assistance with testing**
- **Support and issue resolution during migration**
- **Controller Web** – advise you on changes to movement accounts and Form design to make the most of the Web
- **Import Specifications in Web** – help you re-build import specifications in the Web
