

Upgrade: TM1 to IBM Planning Analytics

Why Upgrade? IBM TM1 10.2.2 reaches End of Support with IBM on 30th September 2019.

This means that although the software will continue to function, IBM will no longer be providing full support or bug fixes for TM1.

By moving to the latest version of IBM Planning Analytics you'll benefit from the major developments IBM has made to the server and interfaces, as well as future updates and security fixes. Our experienced team can help you with all aspects of your migration project.

Key features

IBM Planning Analytics is built to bring speed, agility, and foresight to your business:

- Predictive Insights: automatically uncovered
- Customise your work space
- Integrate Data from multiple sources such as Oracle, SAP and more
- In-memory analytics
- Enterprise wide-reporting with flexible, scalable deployment
- IBM Cognos Business Intelligence built in

Gartner, Inc. has positioned IBM in the Leaders quadrant of its Magic Quadrant for Cloud Financial Planning and Analysis Solutions
